Publication Analysis 1998-2009 in Eye and Vision Research

The European Hotspots by total citations in Eye and Vision Research are England and Germany. Furthermore, the Netherlands, Finland and Austria achieved the highest average citations rates. However, taken together the European performance could not come up with the total publication record in the USA.

Our wish becomes reality! At the beginning of August 2011 the 'Gateway to Vision Research' suggested the editors of Lab Times – News for the European Life Sciences, to implement a publication analysis on Eye and Vision research according to their deep knowledge in performing such rankings for all major biomedical disciplines. Now in the recent issue 7 of Lab Times from November 29th, 2011 their results are published (see www.labtimes.org).

So for the first time a European survey took place covering the period from 1998 to 2009. Our congratulations go to the European Top 30 most cited authors in Eye and Vision Research.
